

BOX NUMBER: **1 of 1**

SITE NAME: **New Housing, Dean's Park, Dornoch**

SITE CODE: **FW/PX: 70341**

UNIT NAME: **AOC ARCHAEOLOGY**

MATERIAL TYPE: **Metal/Slag/Animal Bone/Macroplant remains**

SF No.	Context No.	Material	Description
05.2	068	Metal	Large, likely cast iron key. Decorative openwork bow (one side broken) with moulded, multi-lobed stem and broken bit. Likely 18th-19th century
05.3	068	Metal	Unknown object. Possible vessel handle? Tab with stepped arch on either side. Non-diagnostic
13	068	Slag	Vitrified stone. Amorphous sub-rounded nodule of purple-red-brown vitrified material. Surfaces appear viscous but not fully molten. Nodule is light weight and heavily vesicular with inclusions of individual stones and sandy grit which have become fused with the vitrified mass. Not magnetic. 32.7g.
RT	023	Slag	11 pieces: includes small slag spheres, at least one hammerscale flake and fuel ash slag fragments
RT	051	Slag/Fe	10 small flakes of metallic residue. Could be hammerscale but could equally be small angular fractured flakes detached from surface of corroding iron object
RT	062	Slag	Tiny prill of molten looking slag, magnetic. Globular fleck with trail
RT	010	Slag	Tiny prills of molten looking slag, magnetic. Globular flecks and flat spalls
RT	060	Slag	Tiny prills of molten looking slag, magnetic. Globular flecks and flat spalls
RT	060	Slag	Multiple small pieces: includes small slag spheres, at least one hammerscale flake and fuel ash slag fragments
RT	008	Slag	Two small flakes of metallic material, hammerscale
RT	060	Slag	Small quantity of small slag spheres, at least one hammerscale flake and fuel ash slag fragments

RT	061	Slag	Small quantity of metallic prills; mixture of globular molten looking pieces and fractured angular fragments detached from larger pieces
RT	063	Slag	Fragment of metallic prill, fractured angular piece detached from larger fragment
RT	061	Slag	Small quantity of small slag spheres, at least one hammerscale flake and fuel ash slag fragments
RT	006	Slag	Fragment of metallic prill, fractured angular piece detached from larger fragment
RT	061	Slag	9 small pieces including small slag spheres, at least one hammerscale flake and fuel ash slag fragments
RT	051	Slag/Fe	2 small flakes of metallic residue. Could be hammerscale but could equally be small angular fractured flakes detached from surface of corroding iron object
RT	051	Fe	Likely a small tack or hobnail. Possible circular domed head and square sectioned shank.
RT	065	Fe	Possible blade tip fragment. Triangular with rounded point. Not certain.
RT	062	Shell	
RT	026	Shell	
RT	051	Shell	
RT	026	Wood	
RT	065	Bone	
RT	047	Bone	
RT	060	Charcoal	
RT	023	Heather	
RT	046	Cereal	
RT	048	Barley	
RT	023	Heather
